

Engcon simplifies the transportation and storage of tiltrotators

The introduction of automatic quick hitches has made it easier for excavator operators to disconnect the tiltrotator when extra digging or lifting power is required. On these occasions ground conditions may not be suitable to park the tiltrotator, so it may need to be transported some distance away from the work area. That's why Engcon is now launching a new stand to transport and store the tiltrotator. It thus solves many transportation and storage challenges.

To simplify the handling of automatic quick hitches for different types of surfaces, Engcon has developed a tiltrotator stand where the driver can park the tiltrotator.

"Since we introduced our automatic quick hitch system with EC-Oil at no extra cost on our machine hitches and the top of our tiltrotators, we have seen a significant increase in drivers that connect and disconnect their tiltrotator depending on the type of work they perform", says Martin Engström, product manager at Engcon.

Simplicity is the key

The tiltrotator stand is made of steel and can be equipped with any attachment. The stand is designed to be carried with pallet forks, which makes it easy for example for a wheel loader, skid-steer loader or truck to carry the tiltrotator that is protected and firmly connected in the lower quick hitch.

"The simplicity of being able to connect and disconnect the tiltrotator without having to leave the cab enables the driver to optimise the machine based on the jobs they perform in a simple and smooth way. In addition, the automatic couplings under the tiltrotator are protected when it is parked in the tiltrotator stand, says Martin Engström.

The stand has dimensions of 1200 x 800 mm, which is the same as a Euro pallet and thus also fits in pallet stands intended for these.

Sten Strömgren, engcon Group | +46 [0]70 529 96 32

Engcon, founded in 1990, is the world leader in the manufacture of tiltrotators and their attachments, which increase the efficiency, profitability and safety of excavators. The parent company is located in Strömsund in northern Sweden. Through its local sales companies supplies products and services in Finland, Norway, Denmark, France, North America (US and Canada), Benelux, UK, Germany and most recently in Korea and Australia. Engcon also exports tiltrotators worldwide from Sweden. In 2020, Engcon Group achieved approx. £105 million in sales with 300 employees.
