

engcon will be exhibiting at the international trade show Intermat Paris 2024

On April 24–27th, it's time for the year's biggest trade show for sustainable construction solutions and technologies, Intermat, in Paris, France. The focus for engcon will be its 3rd generation tiltrotator which is now available for sale. At engcon's stand, there will be four different excavators demonstrating the advantages of a tiltrotator equipped excavator. In addition to the tiltrotator taking center stage, engcon will also be displaying a wide range of excavator attachments.

The Swedish tiltrotator manufacturer engcon supplies tiltrotators, tools and attachments for excavators all over the world. The range, which is well established in the Nordics, has expanded in recent years to the rest of Europe. engcon entered the French market in 2002 and aims to actively grow its market share in France and Europe using the participation at Intermat 2024 to showcase its products.

– We know how important it is to see our products in action because many people can hardly believe that the tiltrotator is really as efficient as it actually is. That's why we put a lot of focus on running demonstrations and offering test drives at our stand at Intermat, says Martin Engström, Product Manager at engcon, and continues:

– With our tiltrotator, efficiency and safety are significantly increased. A tiltrotator together with our attachments can replace the need for multiple machines and contributes to the job being done more effectively and fuel-efficiently. In this way, the tiltrotator is an excellent investment for those who want to complete more projects in a shorter time.

EC-Oil, which is engcon's system for automatic quick coupling of hydraulic tools, will also be on show at the stand.

– With EC-Oil, you can safely change attachments in seconds, avoiding the need for hoses or electric cables that move when connecting, which reduces the risk of crushing damage and wear and tear, says Martin Engström.

At engcon's stand there will be the chance to test-drive an excavator fitted with a tiltrotator or watch an experienced driver demonstrate how to best work with the market's most modern equipment. There will be three excavators for test driving: a Kobelco SK75, a Volvo ECR58 and a Develon DX35 all equipped with both buckets and other hydraulic equipment. Our experienced drivers will be driving a Volvo ECR145.

Welcome to stand EXT6 C062!
